

MOLD INSULATION

White Board Grade HT is a high compressive, heat resistant composition material. Finished to a close thickness tolerance, it is ideal for insulation between mold and platen or within mold itself. It is completely asbestos free and durable to withstand rough handling during installation.

Benefits

- High hot compressive strength
- Low thermal conductivity
- Oil and moisture resistant
- Reduces heat loss
- Helps control temperature
- Faster mold startup
- In-house design & machining

Design Components

- Custom design to fit each mold or other application
